

**FRACTORA LASER**

“Treat superficial and deep wrinkles, as well as poor texture, with the Fractora laser (consult with your dermatologist for further information [inmodemd.com](http://inmodemd.com)). The Fractora is the newest generation of fractional ablative lasers. This state-of-the-art anti-aging treatment ablates and resurfaces the skin, improving fine lines, skin laxity, texture abnormalities, and scarring. I am treating face, neck, chest, hands, and upper and lower eyelids with this laser and getting great results.”
